## X-GUARD® LOCKS

Axelent X-Guard® has a variety of flexible locking system that fits all of our doors and switches/switch fittings for machine guarding series.

By mounting the locks, you can transform any section of your machine guarding to a door with a secure lock. It requires conscious action to opened or closed the door from the outside.

### LOCKS

- Several alternative solutions
- Fits all of our doors and switches/switch fittings
- Customized for the X-Guard® products

# AXELENT PRODUCT INFORMATION

## » X-GUARD® LOCKS

**Hinge lock** - Our most simple lock system. A normal hinge lock secure the area from being entered by unauthorized.

**Catch** - The door closes with a simple push and is kept closed by the built-in catch.

**Hitch lock** - Hitch lock This lock is an alternative to our X-lock and has an integrated mounting for non-contact switches. The lock has an adjustable hitch for eliminating any internal play.

**Cylinder lock** - Burglar-proof lock system with easy grip handle.

**Panic lock** - A lock with cylinder can be used as an emergency exit and means of escape where maintenance access is required. Doors with panic lock can always be opened from the inside, even when locked by key from the exterior.

**X-Lock** - X-Lock A versatile door lock system that suits all our accident prevention series. X-Lock has a mechanical bolt that holds hinged and sliding doors closed. The lock is designed so that it requires conscious action to open and close the door from the outside. From the inside X-Lock can not be closed, but it is always possible to open.

**Euchner MGB** - Unique locking system with four LEDs indicating the lock status.
